Exploratory Geographic Proximity: Healthcare Facilities to Floodwaters
Cumilla District, Bangladesh — First Satellite Observation Period: 18–26 August 2024

Observation Period Displayed: 18–26 August 2024 (First Observation Period, Copernicus Sentinel-1 SAR)
Metric: Euclidean straight-line distance (m) to nearest UNOSAT flood polygon in UTM Zone 46N (EPSG:32646).
Cartographic Note: 500m & 1,000m buffer rings are visually generalized for display; metrics use exact analytical geometries.
Methodological Limitation: Euclidean distance does not capture road network severance, bridge washouts, or travel accessibility.
